eVstupy

Web application designed for registration, evidence and management of cards for externs, visitors, vehicles and laptops.
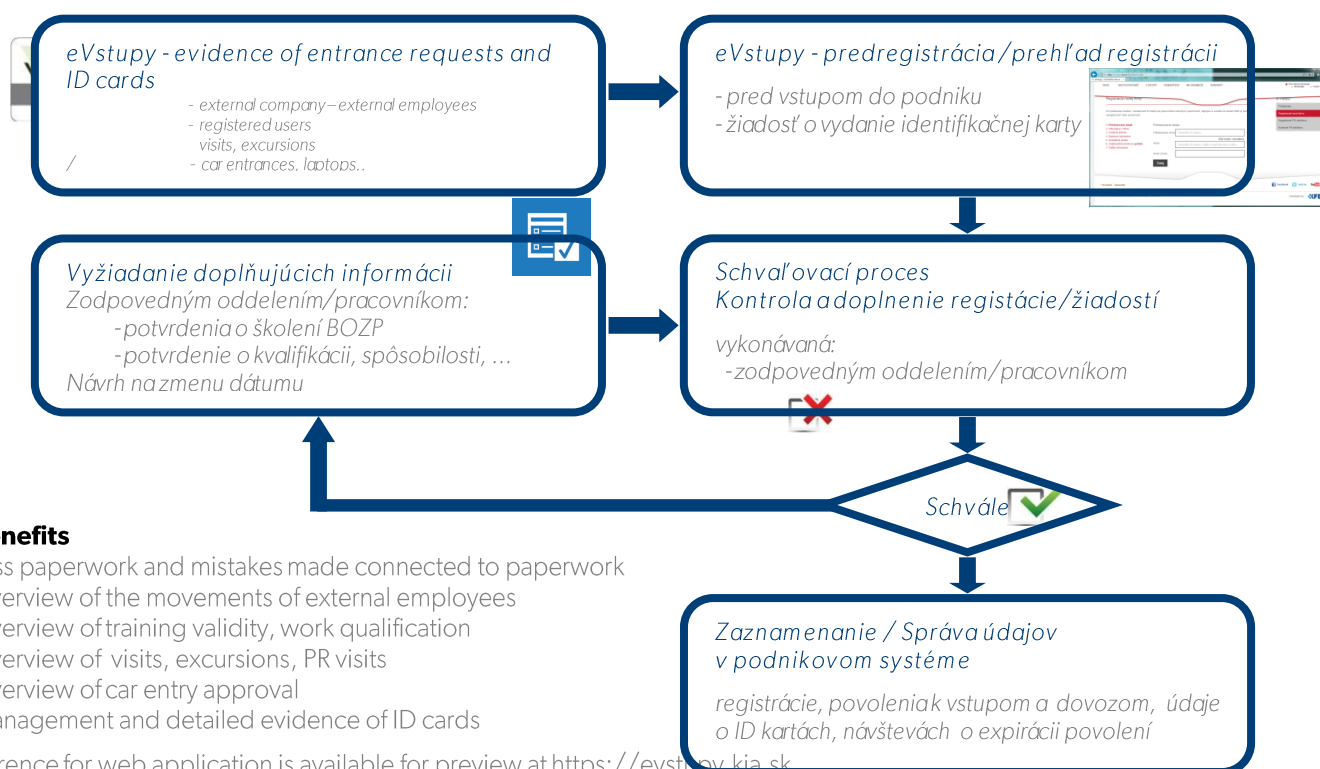

Introductory words

eVstupy is an application for evidence of externs, vehicles, laptops, short-term employment, visits and requests for PR visits. It significantly shortens the waiting lines at the entrance (at the lobby, reception desk) upon prior registration of application for entrance of people and their ID cards, visits, equipment and material before entering the company. By controlling documents needed to enter, perform an activity or deliver material it oversees responsibility for any damage or accident caused by the person who has a right to access the building or perform an activity. In addition, it allows you to generate import forms with support of a program MRS-Exports.

Functionality

The Web page allows a complete management of entries, identification cards for external companies and visitors according to defined rights and ways of signing in. To gain access, a registration is necessary.

The Web interface eVstupy works in a way Registration -> approval process of application form -> approval/disapproval from the company (or a person responsible/department)

eVstupy - evidence of entrance requests and ID cards
- external company – external employees
- registered users
  visits, excursions
