MRS Exports

Evidence of export and import forms of the company
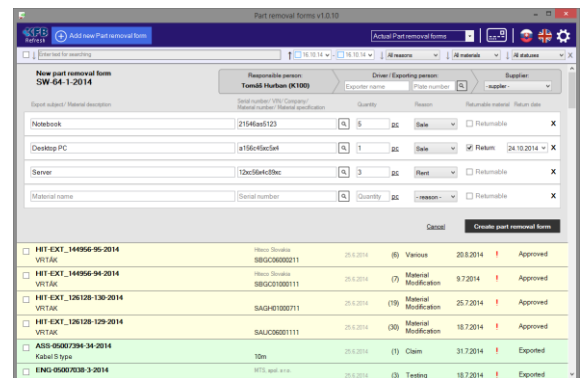

Introductory words:

MRS – Material Removal System is an application created by KFB Control s.r.o team. It is design for evidence of export and import forms of the company.

Functionality:

Thanks to application MRS – Material Removal System, competent users are able to create, change and control export and import forms for logistic purposes. Data about created forms and their current state are sent to a server and to people assigned to authorize them. After successful authorization, the product can be loaded, checked and dispatched. The main benefit of MRS is to eliminated paperwork that comes with export and import materials.
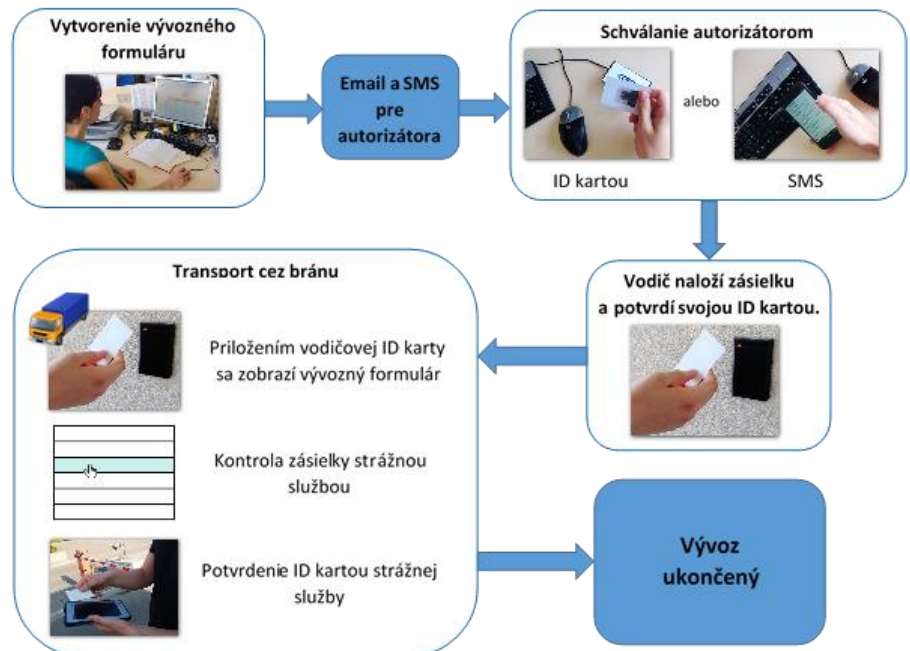

More benefits:
- – Effectivity
- – Clarity in evidence
- – Overview of people involved in the process
- – Inputs from external source SAP
- – Access from web
- – Synchronization and sharing of entries
- – Automatic text message and email sending (via Gate)

Process

The whole process consists of following steps:

1. Creation of export form
2. Authorization
3. Loading the goods into a truck
4. Check at the gate

MRS Exports

The system consists of following components:
